DETAILED ACTION

1. This Office Action is in response to the communication received on 03/29/1999 (the Preliminary Amendment), which paper has been placed of record in the file.
2. Claims 1-13 are canceled. Claims 14-21 are pending in this application.

Specification

3. Claim 14 is objected to because of the following informalities: Spelling error. At line 2, “canoncial” must be replaced to “canonical”. Appropriate correction is required.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a non-statutory double patenting ground

Art Unit: 2764

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 14-21 are rejected under the judicially created doctrine of double patenting over claims 1-13 of U. S. Patent No. 5,867,153 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The main subject matters claimed in the instant application are fully/ inherently/obviously disclosed in U.S. Patent 5,867,153 and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

A system and method of interfacing a plurality of different access devices for distributing information to a plurality of customers comprising: an application for providing data in response to a request for data; a plurality of different access devices for each of the plurality of customers; parsing a data stream from the desired application; creating a token representation of the data stream from the desired application; forwarding the token representation to one of the plurality of access devices; ...

The examiner submits that claims 14-21 in the instant application have similar meaning to claims 1-13 which is within the breadth and scope of definition claimed in the prior patent (U.S. Patent 5,867,153). If allowed, the claims 14-21 of the instant application, not only would provide patent protection but would also extend patent coverage to the combination of claims 14-21,

Art Unit: 2764

already disclosed and covered by the claims in the previous patent. Thus, the controlling fact is that patent protection for the method/system, fully disclosed in and obviously covered by the claims of the prior patent, would be extended by the allowance of the claims in this application.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968).

See also MPEP § 804.

Conclusion

6. Claims 14-21 are rejected.
